

Brand Style Guide

Typography

Public Sans for UI text, JetBrains Mono for code and data values
Loaded via [next/font](#) under the OPEN FONT LICENCE

Public Sans

Public Sans

JetBrains Mono

JetBrains Mono

Type Scale

2xl24px500	Heading 1
xl20px500	Heading 2
lg16px500	Heading 3
base14px500	Heading 4
base14px400	Content and descriptions
sm12px400	Helpers, captions and metadata
mono13px	<code>const times_ms = microtime</code>

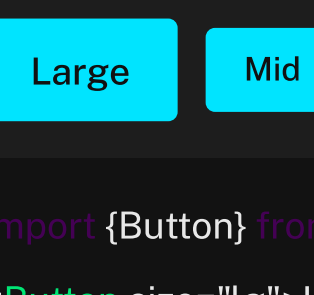

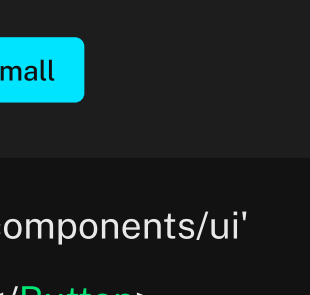

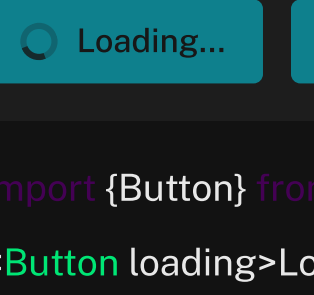

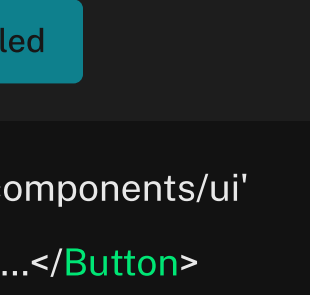

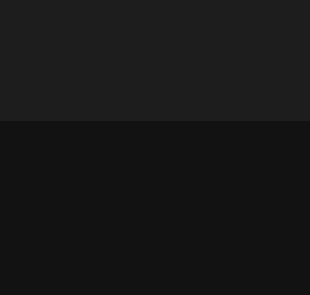

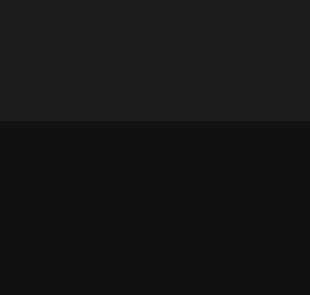

Usage

```
<h1 className="text-2xl font-medium"> Main Heading </h1>
<h2 className="text-xl font-medium"> Section heading </h2>
<p className="text-base font-medium"> Body text </p>
<p className="text-sm text-forground/60"> Muted text </p>
<code className="font-mono"> Time (ms) </code>
```

Colors

All colors are registered as Tailwind classes and CSS variables.
Use class names in JSX, CSS variables in custom CSS,
and raw values from [lib/tokens.ts](#) in JS/TS

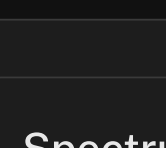

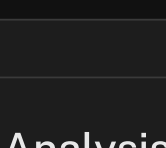

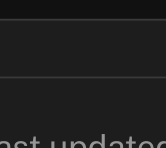

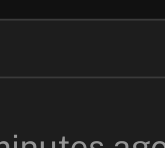

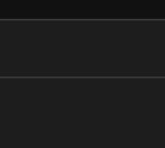

Color palette

 Primary #00e5ff bg-primary	 Background #121212 bg-background	 Card #1E1E1E bg-card	 Foreground #e8e8e8 bg-foreground
 Success #00e676 bg-success	 Warning #ffd600 bg-warning	 Destructive #ff1744 bg-destructive	 bg-border #3a3a3a bg-border

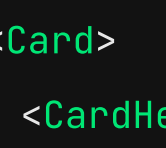

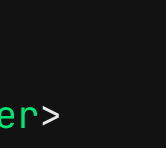

Buttons

There are 5 button variants and 3 sizes

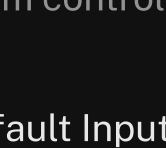

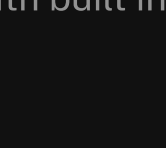

Variants

				
<pre>import {Button} from '@components/ui' <Button variant="primary">Primary</Button> <Button variant="secondary">Secondary</Button> <Button variant="outline">Outline</Button> <Button variant="ghost">Ghost</Button> <Button variant="destructive">Destructive</Button></pre>				

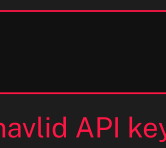

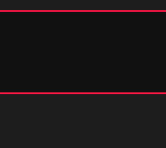

Sizes

		
<pre>import {Button} from '@components/ui' <Button size="lg">Large</Button> <Button size="md">Mid</Button> <Button size="sm">Small</Button></pre>		

States

	
<pre>import {Button} from '@components/ui' <Button loading>Loading...</Button> <Button disabled>Disabled</Button></pre>	

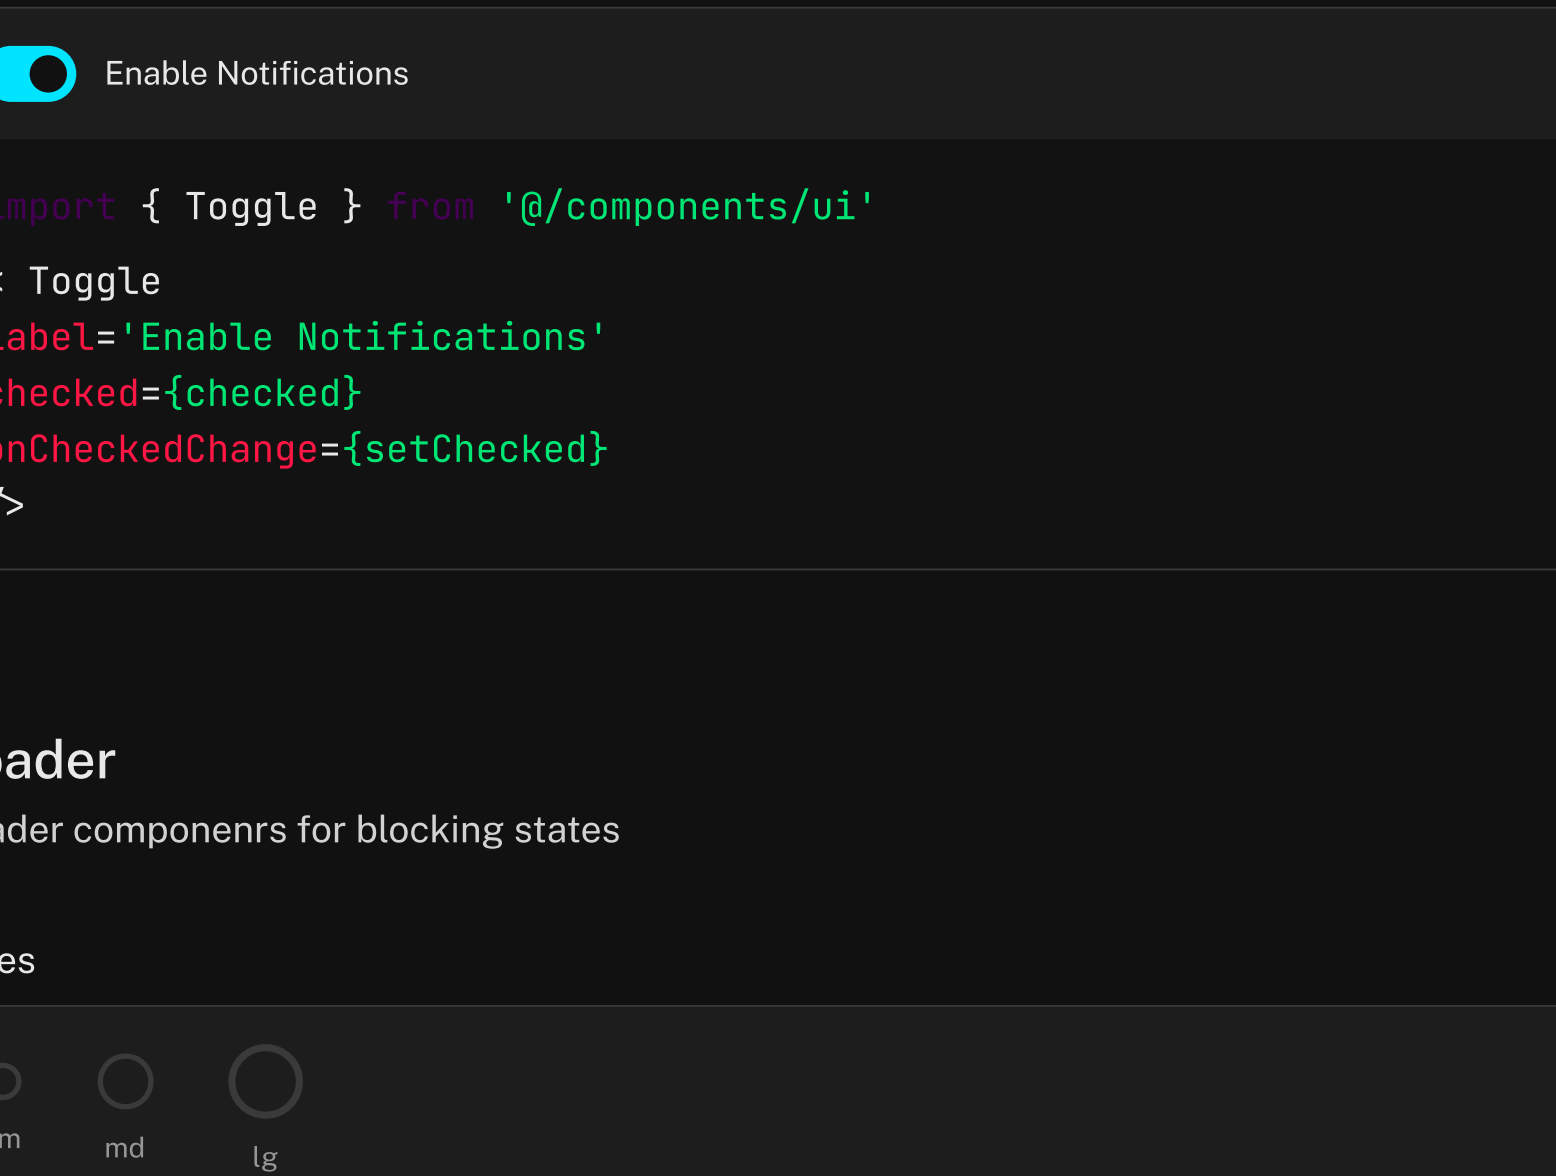

With Icons

	
<pre>import { ArrowRight, Download } from 'lucide-react' <Button leftIcon={ <ArrowRight/> }>Continue</Button> <Button variant= "outline" leftIcon={ <Download/> }>Download</Button></pre>	

Card

An elevated content container made up of sub-containers

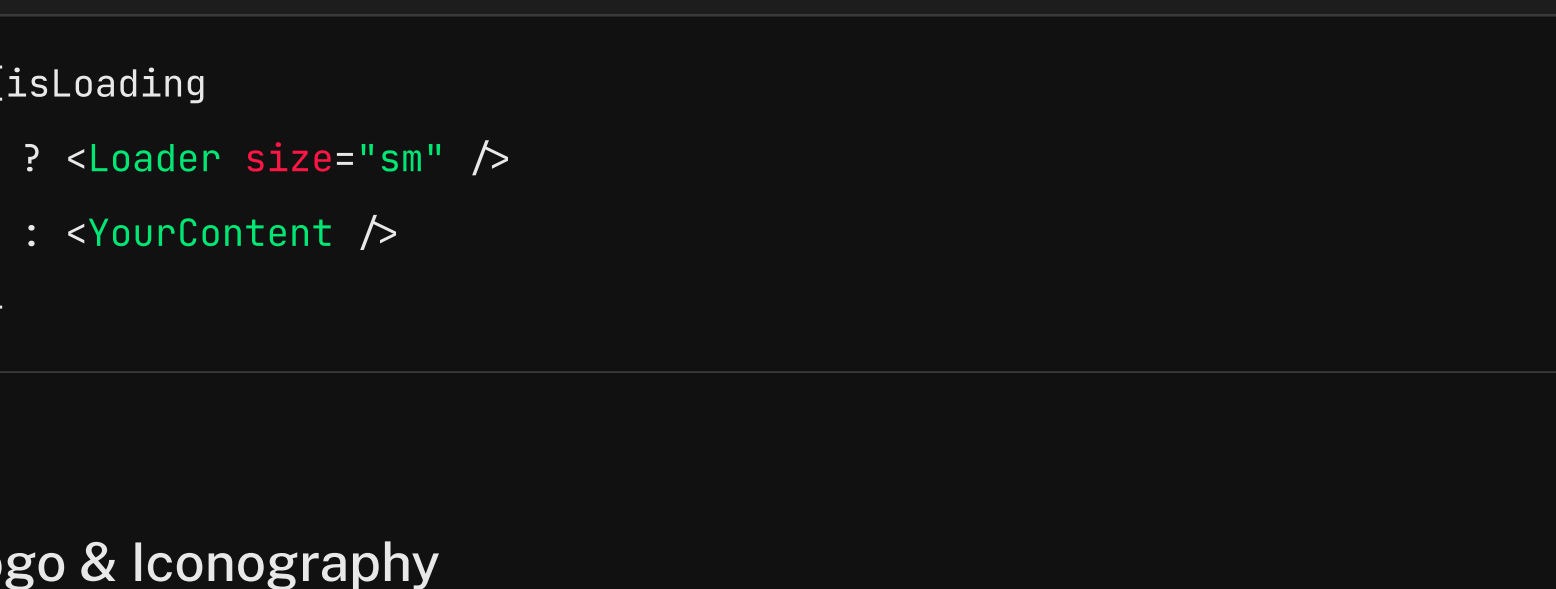

Full Card

<pre>import { Card, CardHeader, CardTitle, CardDescription, CardContent, CardFooter } from '@components/ui' <Card> <CardHeader> <CardTitle>Spectrum Analysis</CardTitle> <CardDescription>Last updated 2 minutes ago</CardDescription> </CardHeader> <CardContent> {/* content */} </CardContent> <CardFooter> <Badge variant="success">Active</Badge> <Button variant="outline" size="sm">View detail</Button> </CardFooter> </Card></pre>

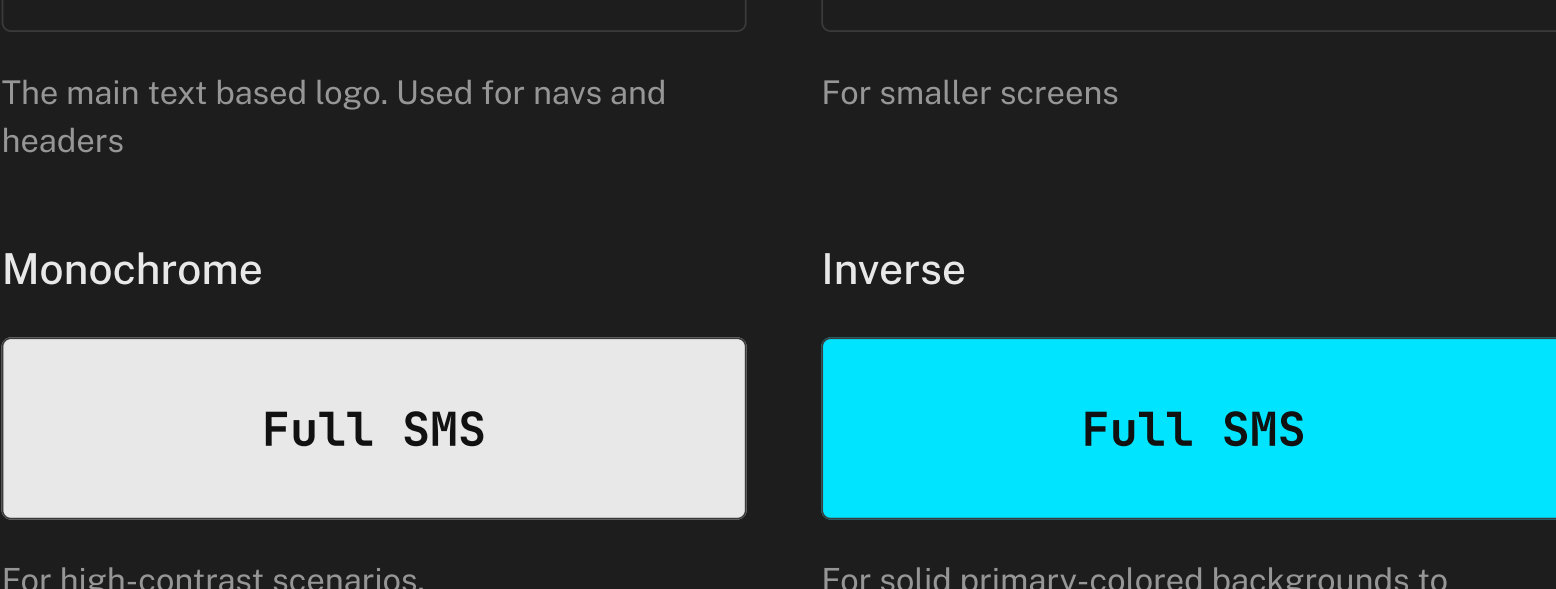

Inputs and Toggles

Form controls with built in label, helper text, error, and focus states

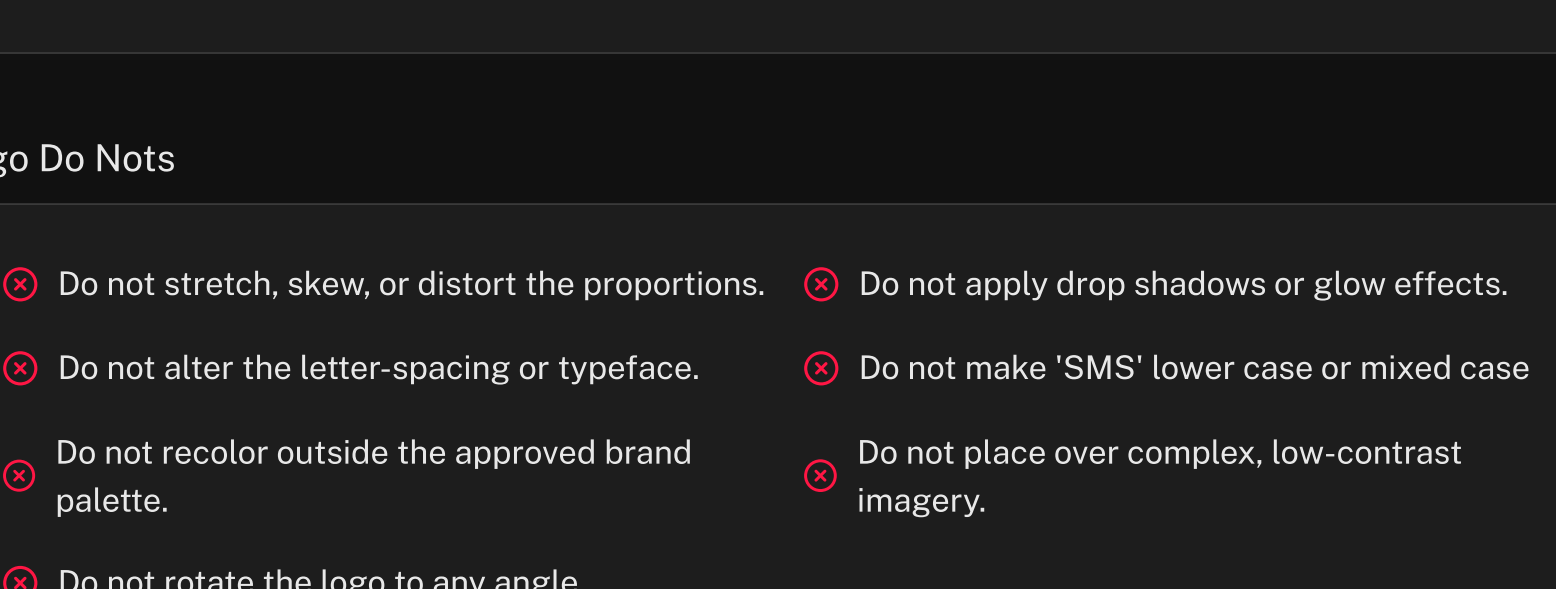

Default Input

<pre>import { Input } from '@components/ui' < Input label=Wavelength placeholder="e.g 420 nm" helperText="Enter wavelength in nanometres" /></pre>

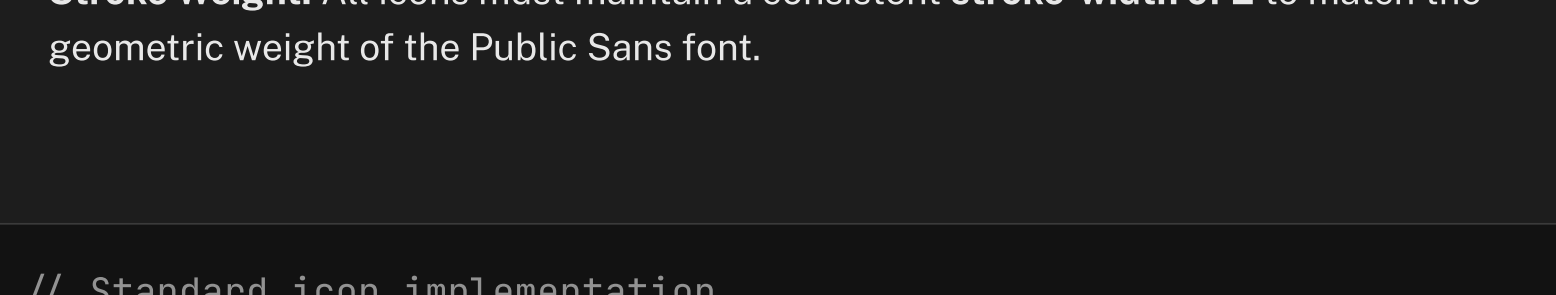

Error state

<pre>import { Input } from '@components/ui' < Input label= 'API key' error= 'Invalid API KEY' /></pre>

Error state

<pre>import { Input } from '@components/ui' < Input label= 'API key' error= 'Invalid API KEY' /></pre>

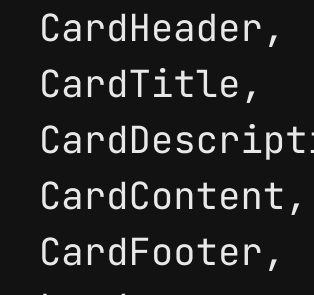

Toggle

<pre>import { Toggle } from '@components/ui' < Toggle label= 'Enable Notifications' checked={checked} onCheckedChange={setChecked} /></pre>

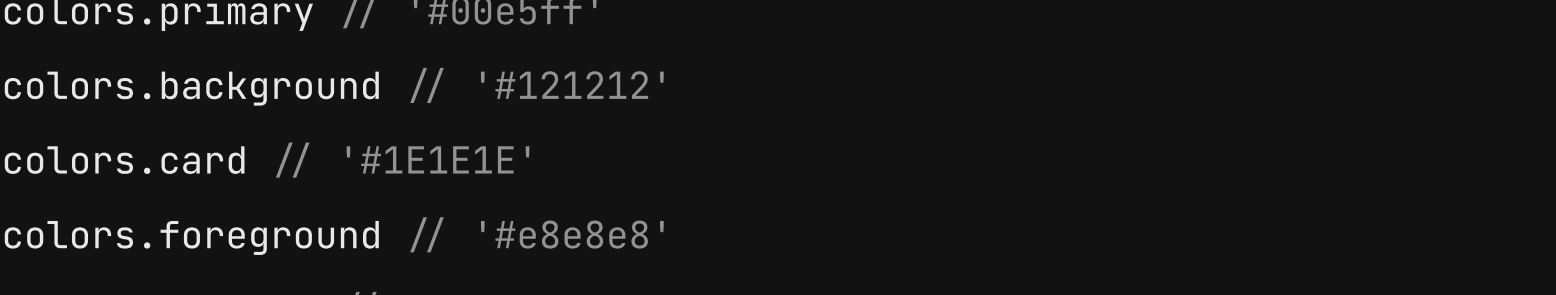

Loader

Loader componerns for blocking states

Sizes

<pre>import { Loader } from '@components/ui' <Loader size="sm" /> <Loader /> {default} <Loader size="lg" /></pre>

Centered in a section

<pre><Loader size="lg" centered /></pre>

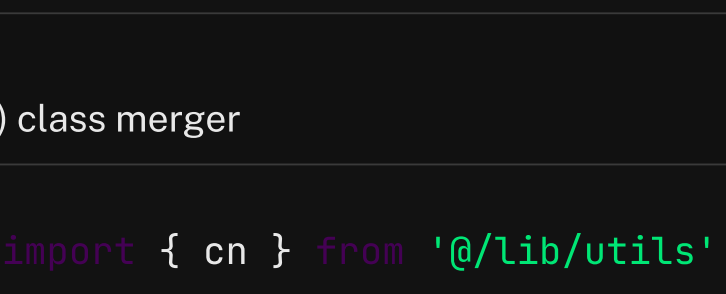

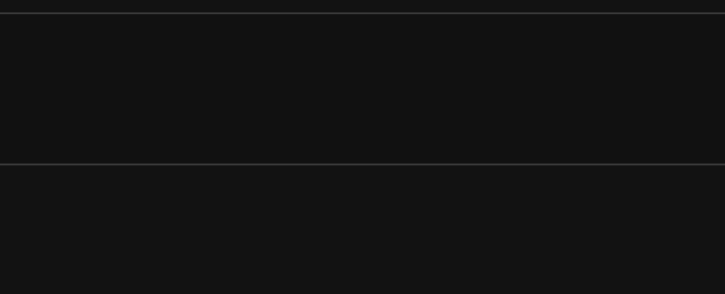

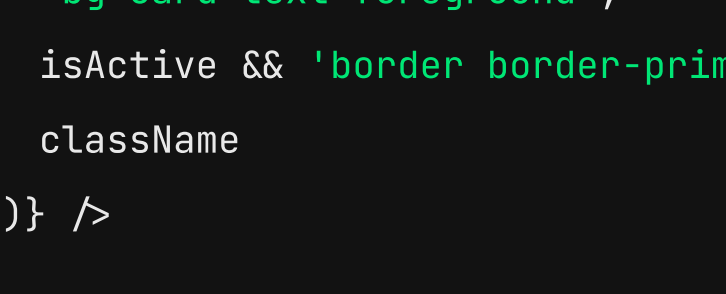

Inline (Conditional Render)

<pre>{isLoading ? <Loader size="sm" /> : <YourContent /> }</pre>

Logo & Iconography

Brand identity assets, clear-space rules, and UI iconography guidelines using Lucide React.

Logo Variants

 The main text based logo. Used for navs and headers	 For smaller screens
 For high-contrast scenarios.	 For solid primary-colored backgrounds to maintain visibility.

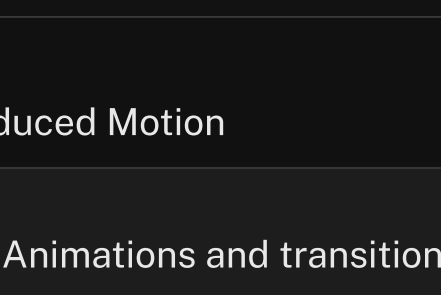

Clear Space & Minimum Size

- **Clear Space:** The minimum clear space around the logo must be equal to the height of the "S" in the logo mark. No other graphical elements or text should enter this zone.
- **Minimum Size (Full):** The full logo must never be rendered smaller than **80px** in width to maintain legibility of the text.
- **Minimum Size (Monogram):** The monogram must never be rendered smaller than **24px** by **24px**.

Logo Do Nots

- ⊘ Do not stretch, skew, or distort the proportions.
- ⊘ Do not alter the letter-spacing or typeface.
- ⊘ Do not recolor outside the approved brand palette.
- ⊘ Do not rotate the logo to any angle.
- ⊘ Do not apply drop shadows or glow effects.
- ⊘ Do not make 'SMS' lower case or mixed case
- ⊘ Do not place over complex, low-contrast imagery.

Icon Rules - Lucide React

• Library: Lucide React is the exclusive icon library for the system. Do not mix with FontAwesome, Heroicons, or Material Symbols. • Standard Size: The default size for standard UI icons is 20px. For dense tables or secondary metadata, use 16px. • Stroke Weight: All icons must maintain a consistent stroke-width of 2 to match the geometric weight of the Public Sans font.
<pre>// Standard icon implementation import { Activity } from 'lucide-react' <Activity size={20} strokeWidth={2} /></pre>

Tokens & Imports

Quick reference for everything exported by the design system.

Component imports

<pre>import { Button, Input, Toggle, Badge, Card, CardHeader, CardTitle, CardDescription, CardContent, CardFooter, Loader, PageLoader } from '@components/ui'</pre>

JS token imports

<pre>import { colors } from '@lib/tokens' colors.primary // '#00e5ff' colors.background // '#121212' colors.card // '#1E1E1E' colors.foreground // '#e8e8e8' colors.success // '#00e676' colors.warning // '#ffd600' colors.destructive // '#ff1744' colors.border // '#3a3a3a' colors.chart // ['#440154', '#31688e', '#35b779', '#fde725', '#21918c']</pre>
--

CSS variables

```
--color-primary: #00e5ff;
--color-background: #121212;
--color-card: #1E1E1E;
--color-foreground: #e8e8e8;
--color-success: #00e676;
--color-warning: #ffd600;
--color-destructive: #ff1744;
--color-border: #3a3a3a;
--font-sans: 'Public Sans', sans-serif;
--font-mono: 'JetBrains Mono', monospace;
```

cn() class merger

<pre>import { cn } from '@lib/utlis' <div className=cn('bg-card text-foreground', isActive && 'border border-primary', className)></pre>

Accessibility Standards

Accessibility guidelines for Full SMS

Conformance & Contrast

- **Target:** WCAG 2.2 Level AA compliance is the strict minimum across the application
- **Text Contrast:** Normal text maintains a minimum contrast ratio of 4.5:1 against its background. Large text and essential UI components maintain a 3:1 ratio.
- **Data Visualization:** All heatmap colourmaps supported by react-plotly.js are colorblind safe.

Keyboard Navigation & Focus

All interactive elements are fully navigable via keyboard. A highly visible focus indicator is mandatory and standardized using Tailwind's ring utilities. <pre>// Standard focus ring applied to Buttons and Inputs <button className={cn('focus-visible:outline-none focus-visible:ring-2', 'focus-visible:ring-primary focus-visible:ring-offset-2', 'focus-visible:ring-offset-background')}></pre>
--

Screen Reader Support

Semantic HTML is used by default. ARIA labels are required for icon-only buttons, complex interactive states, and dynamic data visualizations. <pre>// Example: Accessible icon button <Button variant="ghost" aria-label="Download spectrum data" > <Download aria-hidden="true" /> </Button></pre>

Reduced Motion

Animations and transitions respect the user's OS-level motion preferences. Animation as a whole is kept at a minimum throughout Full SMS <pre>// Using Tailwind's motion-reduce variant <div className="transition-all duration-300 motion-reduce:transition-none motion-reduce:transform-none">Animated Content</div></pre>

Changelog from Demo 1

Explicit breakdown of design and system changes made between Demo 1 and Demo 2.

Format

- **Change:**The once static brad style guide pdf is now a live page in the Full SMS frontend.
- **Why?** A deployed design system easier access to brang guidelines for developers working on Full SMS.

Expanded Component Library

- **Change:** Added visual specifications for components including Cards, Modals, and Loaders.
- **Why?** As the system progressed from wireframes to a fully functional implementation, new standardized components were required to handle more intricate interactions.

Accessibility Standards Upgrade

- **Change:** Elevated the minimum accessibility conformance target from WCAG 2.1 to WCAG 2.2 AA. Added strict focus ring tokens.
- **Why?** Ensures broader inclusivity and compliance.
